

PROTOCOL FOR INFORMATION ON CLONES OF INTEREST

Clones obtained from RESEARCH GENETICS.

Human clones are Unigene Image clones
Mouse Incyte clones are Unigene Image clones,
accessible through Research Genetics web site or
directly at NCBI web site.

- 1) Go to WWW.RESGEN.com
- 2) Click on I.M.A.G.E. clone query.
- 3) Type Clone ID number (will not take GenBank Accession Numbers).
- 4) Click on cDNA ID number
Will transfer to NCBI and directly give clone information, including sequence, insert length, accession numbers, vectors used for cloning and the restriction sites the insert is cloned into, as well as any appropriate citations.
- 5) Rat Unigene clones are NON-IMAGE, therefore are only genbank accession number accessible.
- 6) Go to www.ncbi.nlm.gov/ and look up accession number under UNIGENE. Click on clone of choice to get information about the clone.
